

CMR Specialist - Desk Sheet

Pin this by the console. One page. Everything else is in the manual.

Start your day

- Open the console in your browser (address from your supervisor).
- Sign in with YOUR username and password. Never share logins.

The three statuses

You see	It means	You do
waiting_for_input	The system needs a missing fact	Read the prompt, supply the answer as a follow-up (Card 2)
waiting_approval	A sensitive step needs a human	Check the evidence, Approve or Reject with a reason
plan: template (fallback)	The AI was quiet; safe defaults ran	Double-check the result before acting on it

Golden rules

- Payments first (read-only, safest). Ownership transfers second. Anything awaiting approval waits - do not work around it.
- Knowledge answers without cited sources are the system saying 'I don't know' - treat them that way.
- Stuck? Call: _____ (write the support number here).

CMR Specialist - Data Rules (Pilot)

Read, sign, return to your supervisor. One page.

What the system stores

- Case texts you type; names, plate numbers, NINs, phone numbers, emails, and Remita receipt numbers contained in them.
- Your username on every case, approval, and upload you make.
- Published procedure documents uploaded to the knowledge base.

Who may see it

- Pilot team members only, signed in with their own logins.
- Nothing leaves the office system without written supervisor approval.

How long it lives

- Cases and their data are automatically deleted 90 days after creation.
- Knowledge documents live until unpublished by a supervisor.
- Audit rows keep no case link after purge (what happened is kept; whose data it was is not).

Your duties

- Use your own login. Log out at end of day on shared machines.
- Report suspected misuse or data exposure immediately.
- Do not paste data about non-consenting third parties beyond the case at hand.
